**Comments on “Female Hydrocoele”**

Dear Editor,

Congratulations for the publication of Health Renaissance – a peer reviewed biomedical journal of the BPKIHS and thanks for including me in your list of readership. I appreciate this gesture.

However I would like to make a comment on the Heading”Female Hydrocoele.” I was almost taken a back when I read this heading.

There is a canal of Nuck, the unobliterated segment of the processus vaginalis in female. Collection of fluid in this segment is called Hydrocoele of canal of nuck possibly not “Hydrocoele in Female” This is really startling and a little bit HI-fi! I appreciate if the writer sticks to Hydrocoele of canal of Nuck.

Thanks again

Dr. CP maskey
