## Editorial

It is my immense pleasure to release the present issue of Journal of Nepal Physical Society (JNPS), a research journal in the field of Physics. Nepal Physical Society has been publishing original research articles and conference proceedings as an integral part of its activities since its inception. Nevertheless, the present issue is a novel start toward the publication of a peer review journal of NPS. The articles incorporated in this journal are rigorously reviewed by the national and international experts in their respective fields.

Present issue of the JNPS comprises of original research articles contributed by our NPS members, university faculties, researchers, and students on contemporary issues in all the domain of physics. On our part, we are committed to publishing such articles; for we believe that the exposures of research activities are significant to the innovations and development of new technology and awareness. I, on behalf of the editorial board of Nepal Physical Society, would like to invite scholarly research and review articles from all authors including prospective and established for the forthcoming issues of the journal. Moreover, we encourage you all to support in our endeavour to build and share knowledge for research activities in the field of Physics.

Finally, I especially thank reviewers for their esteemed suggestions and feedbacks to standardize the articles. Further comments, queries, suggestions, and correspondences are highly appreciable.

**Narayan P. Chapagain, Ph.D.**
