

Editorial

We are proud to continue the tradition of collaboration between Nepal Physical Society (NPS) and Association of Nepali Physicists in America (ANPA) to bring this special issue of the Journal of Nepal Physical Society (JNPS). This issue contains 9 selected peer-reviewed original research and review articles out of 64 scientific works presented at ANPA conference 2022. The manuscripts span a wide range of topics including but not limited space and atmospheric physics, plasma, atomic molecular optics, material science, condensed matter physics, high-energy, and nuclear physics. Producing an open access

special issue requires the dedicated effort from many individuals. Authors who invested numerous hours in conducting research and writing high quality manuscripts as well as reviewers and editorial team to coordinate review process and edits truly made this issue special. We would like to thank ANPA and Nepal Physical Society for giving JNPS as avenue to openly publish research papers presented on ANPA conference 2022. We would also like to thank scientific program committee, many volunteers, and sponsors for successful completion of ANPA conference 2022.

Dr. Pashupati Dhakal
