

## The Role of Radiologic Journal

**Joshi BR**

Radiologic journal play an important role in advancing research. It is a means of disseminating new knowledge and developing skills of critical thinking. In addition, outmoded considerations and practice can be abandoned.

Journals play a critical role in better instructing interested radiologists in how to improve their research and critical skills. Journal editors can better differentiate the various levels of research quality for readers. They could be more rigorous in rejecting manuscripts that do not meet stringent criteria for scientific validity, reproducibility and generalizability. They have to insure that research they publish is ethically performed and properly reported.

The editors need a vision of what radiology research might become. They must be willing to reject poorly rationalized, improperly performed or unethical research.
